

ABSTRACT OF THE DISCLOSURE

The present invention aims to create a database for realizing proper correction processing in accordance with inherent difference and/or time-lapse
5 change of an output unit. The present invention provides an image processing method comprising a holding step for holding an original database in which a correction condition corresponding to a reproducing property of an output unit is stored, a forming step
10 for writing a correction condition formed by calibration processing in the original database to create a new database, and a correction processing step for effecting correction processing regarding input data by using the created new database, and wherein the
15 calibration processing not only creates the new database but also forms a management file based on head identification information of a head used in the output unit.
